Geotextile

NONWOVEN NEEDLE PUNCHED GEOTEXTILE
DuraForce®
NONWOVEN GEOTEXTILES

For farm races, driveways, retaining walls, soak pits, trench drains and much more.

Geotextile separates expensive race rock from the subbase. If geotextile is not used, the race rock mixes with the sub-base aggregates causing the sub-base to lose strength and fail.

Nonwoven geotextiles are used primarily for drainage, filtration, separation, reinforcement and protection. Available in a range of NZTA approved grades.
FilterPlus™
NONWOVEN GEOTEXTILE FILTER FABRIC

FilterPlus is a premium nonwoven geotextile filter fabric. With its small roll size, it is used for subsoil drainage filtration and separation by preventing the intermixing of aggregates and soils in smaller applications.

FEATURES

Convenient widths for all drainage applications

FILTRATION
Prevents the migration of finer soil particles into drainage systems and aggregates.

SEPARATION
Prevents the intermixing of aggregates and soils.

DRAINAGE FILTRATION
Prevents soil particles entering drainage systems without restricting water flows.

DRAINAGE
Assists conveyance of water along the plane of the geotextile to an outlet, either horizontally or vertically.

FILTERPLUS Product Codes
76012 FilterPlus 0.6m x 50m
76014 FilterPlus 1.0m x 50m
56032 FilterPlus 1.9m x 50m
