Slope Installation Detail

Installation Guidelines

These guidelines are recommendations only

Prepare the ground by clearing away any rocks and debris, then level as much as possible to ensure the BioJute Matting will have adequate ground contact. We recommend leaving planting of plants until BioJute Matting is in place. (See step 7)

Create an anchor trench at the top of the slope that is a minimum of 600mm back from the crest with minimum dimensions of 150mm deep, and 150mm wide along the slope where the BioJute Matting will be applied.

Repeat step 2 for the toe of the slope (600mm out from the toe of the slope).

Line the anchor trench at the crest of the slope with BioJute Matting and backfill and compact as you make your way along the slope.

Roll out the BioJute Matting down the slope and ensure you maintain a 10mm overlap between adjacent rolls and 300mm for joints part way down the slope. Repeat the beginning of step 5 and line the anchor trench at the slope toe.

Pin the matting to the slope, with spacing that suits the application. Please refer to the pinning diagrams on page 4 for typical recommendations. We recommend using Strol Weedmat Pins or SquarePegs to secure your matting in place.

When you are ready for planting, ensure that neat cuts are made into the BioJute Matting to allow for easy insertion of plants. As best practice, we recommend pinning the loose ends of the cut once the plant has been planted.

Channel Installation Detail

Installation Guidelines

These guidelines are recommendations only

Prepare the ground by clearing away any rocks and debris, then level as much as possible to ensure the BioJute Matting will have adequate ground contact. We recommend leaving planting of plants until BioJute Matting is in place. (See step 6)

Create an anchor trench at the top of the batters on either side of the channel that is a minimum of 600mm back from the crest with minimum dimensions of 150mm deep, and 150mm wide along the slope where the BioJute Matting will be applied.

Line the anchor trench at the top of the channel sides with BioJute Matting and backfill and compact as you make your way along the channel.

Roll out the BioJute Matting down the channel (in the flow direction) and ensure you maintain a 100mm overlap between adjacent rolls (side-by-side) and 500mm for longitudinal joints along the channel (end on-end)

Pin the matting to the slope, with spacing that suits the application. Please refer to the pinning diagrams on page 4 for typical recommendations. We recommend using Strol Weedmat Pins or SquarePegs to secure your matting in place.

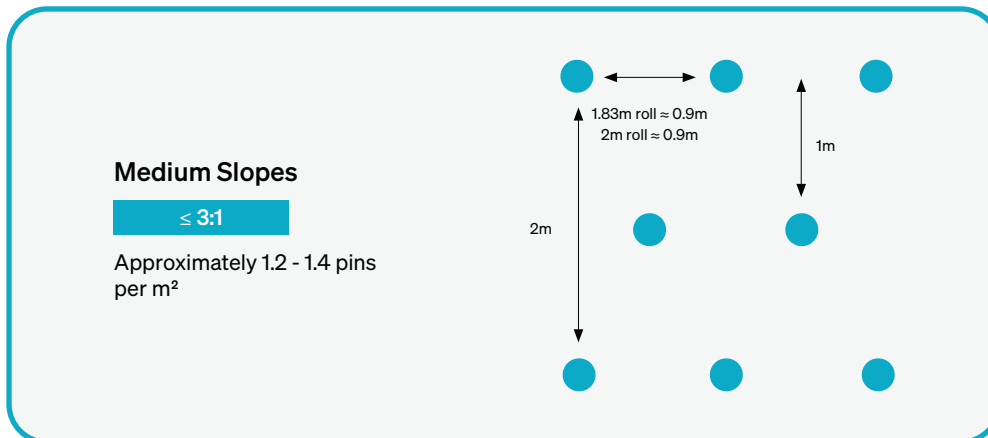

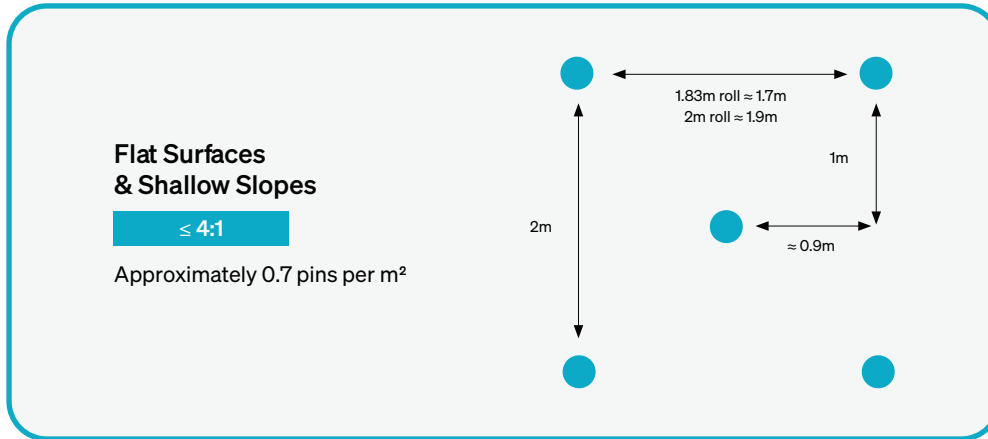

When you are ready for planting, ensure that neat cuts are made into the BioJute Matting to allow for easy insertion of plants. As best practice, we recommend pinning the loose ends of the cut once the plant has been planted.

Pinning Diagrams

Please note that the below diagrams are generic recommendations.

Notes: *Dimensions allow for pins to be placed approximately 50mm from the roll edge.
