Natural Paving™

nature locked in

Natural Paving – the innovative and unique range of permeable paving. From pebble paths, patios and driveways, transform your home with a natural look.

Natural Paving encompasses a range of a honeycomb type panels with a geotextile bonded to the base. Designed with convenience in mind, pebbles are locked in the geometric cells, and the permeable geotextile of the Natural Paving panels reduces puddles and runoff whilst also acting as a weedmat.

Path Grade for paths, patios & walkways

Natural Paving Path Grade is designed for patios, paths, gardens, parks and cycleways. Create enduring pebble landscaping areas with Path Grade pavers for pedestrians, bicycles, wheelchairs, and golf carts.

Vehicle Grade for driveways & car parks

Natural Paving Vehicle Grade is ideal for creating natural pebble driveways, car parks and turning areas where traffic is typically cars, trucks and buses. Vehicle Grade Panels are designed for pebble surfaces to stay looking flat, uniform and professional, the infill stones or pebbles will not migrate in areas subject to repeat wheel tracking or turning.

Grass Grade for grassed pedestrian & vehicle areas

Natural Paving Grass Grade is used to strengthen grass in pedestrian, parking and vehicle areas. These pavers are designed to create a grassed surface that won't rut or become muddy and is easy to walk and drive on. The honeycomb cells protect the grass root system promoting healthy growth. Grass Grade pavers do not absorb moisture from the surrounding soil, drying out and killing the grass, as traditional style concrete grass paving does.

Easy to install and environmentally friendly, Natural Paving allows you to create a permeable pavement that is stable, flat and never cracks. Create a paving area that is practical, safe and desirable, *that's the Natural Paving difference!*
