GREVILLE ROAD PROJECT

ALBANY

ENVIROSIEVE TURBIDITY CURTAINS

CONTRACTOR	HEB Construction
CLIENT	NZTA
LOCATION	Albany, Auckland
PRODUCTS USED	EnviroSieve Curtains, SiltFence, Super SiltFence Silt Socks, DuraForce® geotextile

**ADVANCED
GEOSYNTHETIC
SOLUTIONS**

PROJECT

Contractor HEB Construction used four 25m x 1.5m EnviroSieve Turbidity Curtains fastened together to contain sediment from a 100m long section of road works with outstanding results. The Turbidity Curtain has a flotation pontoon at the top, enclosed in a canvas sleeve with a non woven geotextile skirt for effective containment of sediments. The durable materials used allows contractor to re-use turbidity curtains multiple times. A number of other environmental products were also used from Cirtex, SiltFence, Super SiltFence, Silt Socks and DuraForce geotextile for the effective control of sediment laden run off, protecting our waterways.
