SUREPAVE™

CONTRACTOR	Grande Landscapes
CLIENT	Canberra International Airport
LOCATION	Canberra International Airport, ACT, Australia
PRODUCTS USED	SurePave

## ADVANCED GEOSYNTHETIC SOLUTIONS

### PROJECT

SurePave was chosen to be used at this high-profile development to create a free draining, pothole free, grassed surface able to withstand heavy turning vehicles.

As can be seen in the photo it bore the weight of the big 35 tonne Bronto fire tower, leaving no damage to the surface.

SurePave provides a structure beneath the surface that is designed to spread the load to the base below.

This minimises compaction and eliminates pot holes and ponding.

The result is an aesthetically pleasing, durable and functional landscape for years to come.
