OVERFLOW PARKING

CHRISTCHURCH

SUREPAVE™

AFTER

CONTRACTOR	Asphalt & Excavation
CLIENT	Christchurch City Council
LOCATION	QE2 Park, Christchurch
PRODUCTS USED	SurePave

ADVANCED GEOSYNTHETIC SOLUTIONS

PROJECT

SurePave was chosen to be used at this high-profile site because it can be installed with the minimum of excavation works possible.

This makes SurePave a very cost-effective choice when looking for an aesthetically pleasing, durable finish.

The contractors simply leveled the existing surface and contoured to shape using a thin layer of sandy topsoil. SurePave was then laid directly onto this and filled with the same mix of soil, then sown. Sadly following the Christchurch Earthquakes the stadium had to be demolished.

SurePave is a recycled plastic paving system that provides a structure beneath the surface that is designed to spread the load, minimising compaction and allowing surface water to permeate through.

Whether used for grass or gravel, SurePave will provide a lasting solution to a lot of issues that have been difficult to overcome.
