

# Coir Logs

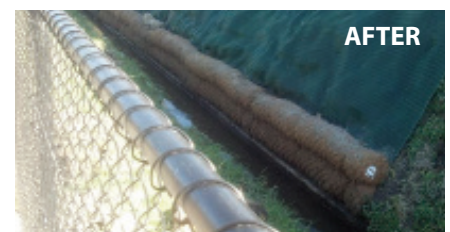

BioCoir Coir Logs are manufactured from 100% biodegradable material, the main log is coir fiber bound tightly with a coir mesh holding the log together.

BioCoir Coir Log is commonly used in stream bank and waterway engineering and beatification projects to prevent erosion and allow vegetation to establish. The BioCoir Logs will have a life span of 3-6 years depending on the environment they are installed in. The BioCoir Coir Logs can be held in place with timber stakes, they are also often stacked to form a wall and connected to each other with coir rope.

## FEATURES AND BENEFITS

- Quick and easy to install
- 100% biodegradable
- Forms well to curves and shapes
- Wide range of sizes
- Natural looking product allowing work in sensitive areas
- Light and easy to place
- Prevents erosion
