

EnviroSieve™ Turbidity Curtains

Working in sensitive marine and freshwater environments requires special care to protect the surrounding eco system. EnviroSieve™ Turbidity Curtains are ideal for containing waterbourne sediments to the immediate working environment.

Incorporating a EnviroSieve™ Turbidity Curtain in your project can avoid costly fines from inadvertently breaching environmental consent requirements .

The main curtain is manufactured from a heavy weight Non-Woven Geotextile, with a high visibility canvas float filled with closed cell foam and a pocket to carry a chain weight at the base. For longer curtains linking clasps can also be incorporated to connect the sections together.

FEATURES AND BENEFITS

- Fast and easy to install
- High visibility floating device
- Wide range of depths and lengths available
- Curtain filter material adjusted to suit conditions
- UV resistant flotation device
- Available for prompt delivery
