

CASE STUDY

HAGLEY CRICKET OVAL

TEMPORARY STADIUM

PLATIPUS EARTH ANCHORS

PROJECT	Hagley Oval Temporary Stadium
CLIENT	Christchurch City Council (CCC)
CONTRACTOR	City Care Ltd
LOCATION	Christchurch
PRODUCT USED	Platipus S8 Anchors

Christchurch's Hagley Cricket Oval was chosen to host a number of the 2015 Cricket World Cup Matches. This required the erection of an extensive temporary stadium.

The contract was under immense time constraints, due to the close proximity of the opening match being held at the stadium and a short window of time between construction of the stadium and the deadline for the anchoring to be completed.

Platipus S8 Anchors were required to be installed and tested to achieve 40kN per anchor point. These were then connected to the structure with tensioned straps.

Cirtex Industries was commissioned by City Care Ltd to supply the Platipus Earth Anchors, installation and testing gear and provide training and support throughout the project.

Cirtex fast tracked the supply of anchors from the United Kingdom based manufacturer, oversaw the delivery, installation and testing of the anchors inside the 10 day time frame allowed for the installation, testing and connecting the anchors to the structure.

Cirtex appointed a project manager to be on call for the duration of the project, which allowed constant contact with the team on site to ensure there were no delays in the program.

The project was a huge success due to the close communication between Cirtex, City Care, the engineer and the Cricket World Cup organisers. This resulted in all involved in the project being extremely happy with the products and constant service and back up provided by Cirtex.
